

WHY CHOOSE FUTURES®?

01

FUTURES® is powered by an in-house network solving algorithm that is 1000x faster than the mainstream competitor (SPE-200754)

02

Much of the original developing team behind FUTURES® still works at the company so adding custom features will not be an issue

03

Compared to other similar industry software, FUTURES® is by far more affordable to purchase and maintain.

What is FUTURES®?

- FUTURES® is a software package developed by SERAFIM Ltd to provide an integrated asset model specifically for reservoir engineers.
- It ties together reservoir simulation results, historic production data, and surface network constraints to forecast future production, study the behavior of reservoirs under different constraints, and optimize field developments.

FUTURES®

THE WORLDS FIRST TRUE
GENERAL-PURPOSE OIL/GAS
PRODUCTION FORECASTING
SYSTEM.

HOW DO WE PROVIDE SUPPORT?

24/7

Features

*Because 99% of bugs are fixed within 24 hours, we can guarantee that your calculation results will be free of known bugs.

TESTIMONIALS

FUTURES[®] saves two weeks per year for every reservoir engineer we have just by using it for reserves updates"
- Sinopec Manager

I can personally testify to the very significant manpower savings achieved through retiring old, error prone spreadsheet systems, with FUTURES[®] Asset forecasting is made simple fast and robust
-Shell Reservoir Engineering Manager

SERAFIM Ltd keeps to its promise of 24hrs response time.
-Experienced FUTURES support customer
